## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-18 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a non-volatile SONOS memory device and a method of fabricating thereof having all exclusive limitations as recited in claims 1, 6, and 14, comprising a semiconductor substrate including a source region and a drain region, a channel in the substrate between the source and the drain, a gate insulation layer including a nitride layer over the channel, and a gate electrode over the gate insulation layer, the channel being a stepped channel comprising a top part, an inclined part, and a bottom part, and the nitride layer being formed over the inclined part and the bottom part.

Although some of the method claims do not explicitly label the stepped pattern the stepped channel, the stepped pattern as claimed is the stepped channel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 6,472,706 to Widdershoven et al. discloses a non-volatile memory cell comprising a pair of source/drains, a channel in between the pair, and a stacked gate comprising a charge-trapping insulating layer, a control gate, and a select gate, the stacked gate being formed on only one of the source/drains.
